

There are savings hiding in your used heat.

Enbridge will cover up to **75%** of your project cost*

Did you know that by recovering waste heat you can significantly lower the heating cost and the carbon footprint of your facility? Heat recovery is a low cost energy efficiency measure that captures otherwise wasted process heat and puts it back to work for you, improving the energy efficiency of your industrial processes.

Extended until **October 30, 2019**, we are doubling the incentive for all process heat recovery projects. This means you can **get up to 75% of your project cost covered** (with a maximum incentive of \$50,000 per project).*

Your Energy. Our Experts. Smart Savings.

Contact us today! Funding is limited and the offer is available on a first-come, first-serve basis.
